## The Leading Education & Research Institution in Urban Sciences in Korea

*Soontak Suh*

President, University of Seoul **Suh, Soon Tak**

The history of the University of Seoul is the history of Korea in view of social development. Since its establishment in 1918, the University of Seoul has changed its specialized area from agriculture, to industry in the 1970's, and again to urban studies in the 1980's. The University of Seoul has become more prestigious in recent years as it develops strategically Urban Studies. As the only university sponsored by the Seoul Metropolitan Government, the University of Seoul is leading the education and research in Urban Studies in Korea.

Urbanization becomes a crucial phenomenon now, and the developing world is where this drastic urbanization is occurring. For the first time, more than half of world population lives in cities. In particular, over 90 percent of urban growth is taking place in the developing world at the moment. Urbanization in the developing world was once considered unmanageable and hence restricted. However, the question is not how to constrain urbanization, but how to best prepare for it, maximizing the benefits of urbanization by promoting sustainable development while minimizing the negative externalities of urbanization such as congestion, crime, sprawling slums and environmental pollution.

The Ministry of Land, Infrastructure and Transport (MOLIT), the International Contractors Association of Korea (ICAK) and University of Seoul (UOS) jointly offer a master degree program of infrastructure planning and development, especially designed for public officials from designated partner countries of Korea. It aims to enable public officials to enhance their ability to improve quality of their citizens' lives by providing world-class theoretical knowledge and Korea's practical experiences in infrastructure and territorial development.

The University of Seoul warmly welcomes all the participants of the MOLIT-ICAK-UOS Global Infrastructure Development Scholarship Program (GIDSP), pursuing the "Master's Program of Infrastructure Planning & Development (MIPD)," and encourages all of you to keep your passion. Thank you.

## Hub of 'International Networking' for Global Experts

*Hyeonpark*

Dean of ISUS, University of Seoul **Park, Hyeon**

In the midst of rapid urbanization during the process of compressed economic growth our country has accumulated unique experiences and know-hows in urban development and administration field. Such urban growth of the Republic of Korea has helped gain the attention of many countries abroad hoping for an opportunity of sharing the experience. Meanwhile, although our construction companies have won high reputation in infrastructure development such as road, harbor and plant construction, the turning point for a qualitative take off has become necessary as the competition with other development-pursuing countries intensified.

Like so, having the domestic and foreign demand in consideration, providing a comprehensive solution relative to the urban development and management with our experience and know-hows and opening the way to the comprehensive package of urban development towards the whole world have become a national agenda that we must pursue. During the process, we anticipate further overseas expansion of the Korean construction companies by the development of new modules.

University of Seoul, which pioneered through the research and education of urban related fields, has met such demands of the current era by establishing the International School of Urban Sciences with the goal of fostering global city professionals in 2012. On one hand, we educate domestic city professionals so that they will be able to advance towards overseas urban development and management fields, and on the other hand, we provide foreign public officials the opportunity to learn the experience of Korea first-handedly by managing the International Urban Development Program (IUDP). In addition, our graduate school will be the platform on which domestic professionals and foreign public officials cultivate global perspectives and insights by interacting with each other and create an international network.

The ISUS is committed to establishing itself as the center of research and international cooperation in the area of urban sciences.

We expect your continued interest and support. Thank you.

## University of Seoul, The Birthplace of Korea's Urban Study

The University of Seoul was founded in 1918 and has provided higher education opportunities for the intelligent, motivated, and creative scholars. As a public institution, the University of Seoul is committed to addressing the social, regional, technological, and creative issues of the urbanized world. It has thus dedicated itself to cultivating leaders who will shape the urban future of Korea and the world. Its faculty, students, and administrative body are also distinguished by a commitment to civic values and a dynamic urban civilization.

The University of Seoul insists on quality and breadth. It is committed to both theory and practice, and endorses openness towards students and Korea's noticeable institutions. With more than 10,000 students enrolled, the University of Seoul consists of seven undergraduate colleges and almost 90 fields of study in the Graduate School. With diverse and specific programs that integrate research and policy, practice and education, the University of Seoul seeks a balance between academic and professional concerns, between visionary goals and practical research. Along with basic research, the University of Seoul functions as a think-tank in formulating and supporting the major policy goals of the Seoul Metropolitan Government.

In this sense, the International School of Urban Sciences has maintained a dominant position in a field of urban sciences. These range from environmental and civic engineering, architecture, urban planning and landscape design to public law and administration, taxation science, economics, urban sociology and management. With Korea's largest and finest group of human and informational resources focused on the future of the world's city, it boasts a unique array of research institutions working on the solutions to its problems and creative visions for its future.
